

ABSTRACT OF THE DISCLOSURE

Disclosed is a nail clipper provided with cutting edges having a curvature corresponding to a section and a curve of a nail, in which a blade body can be replaced with one having suitable cutting edges according to a shape and a size of a nail. In a nail clipper according to one embodiment of the present invention, cutting edges formed at one ends of 5 upper and lower blades of a blade body are curved with a first curvature to the one end of the blade body while being bent with a second curvature with respect to the blade body. In a nail clipper according to another embodiment of the present invention, a blade body is removably received in a casing and a lever for applying force to the blade body is coupled 10 to the casing. Since the blade body can be removably disposed in the casing, thus, it is possible that one having cutting edges corresponding to a size of the nail can be coupled to the casing, instead of the blade body.
